

Forklift Tire

High Load Solid Tire

- 1.High elasticity, strong heat dissipation, good abrasion resistance.
- 2.Suitable for low speed high load vehicles or machinery.
- 3.Long service life, low deformation rate, less impact on the forklift, reduced maintenance costs,increased the forklift driver's comfort.
- 4.Universally used series-suitable for most normal working environment .
- 5.Resistance to tear series-Used in special working environment ,such as machinery and ironware, metal recycling, construction plant or mining, and shipyard etc. it has strong resistance to be cut and be torn ability .
- 6.Strong wear-resistant series--used in logistics, port, large factory assembly line with day and night working condition of work and so on .
- 7.High temperature resistant series--used in metallurgy, glass ceramics, etc.
